Prime Paths Revisited

Prime Paths Revisited

- Edges - $\{1,3\}, \{3,3\}, \{1,2\}, \{1,4\}, \{2,4\}, \{3,4\}$
- Start node - 1
- End node - 4

1. Start with Simple paths

For each edge put ! If ends at end node, * if loop

Extend each path that doesn't have ! or *

Prime paths are paths that aren't subpaths of any others

1,3 1,3,4! Prime paths: $\{1, 3, 4\}, \{1, 2, 4\}, \{3, 3\}, \{1,4\}$

3,3* 1,2,4!

1,2

1,4!

2,4!

3,4!
